JOHN HERR, PHD

- Professor of Cell Biology, Urology and Biomedical Engineering at University of Virginia Health System
University of Virginia researchers Eusebio Pires (left) and John Herr were originally investigating the protein, SAS1B, when they came upon the link between human eggs and cancerous tumors. Researchers suggested that acidity releases the chemical and could mean a dramatic advance in cancer research.

AND NOT JUST HORSES
AND NOT JUST HORSES
In the daily weave of our lives, those who have died are still strong, guiding threads. Theirs is the golden glimmer or perhaps the brilliant red or the melancholy blue—still they are part of the whole cloth of our lives. They are the ancestors: the “goers before”.

In the hour-to-hour rush of our daily tasks, they travel with us through something they taught us which is now ours to do, through something they loved which is now ours to carry out, through something we shared which is now ours alone and yet not.

They are more than remembered, they are memory itself. For what we love lives on -their words and wisdom our guide, their humor our relief, their restless concern for the world our charge. Through this, we know immortality.
