

# **A VISUAL DEPICTION OF RESULTS OVER TIME AFTER STERILIZING A MALE DOG WITH CALCIUM CHLORIDE**

Peter Denooij

Calcium Chloride Castration, Edmonton, Alberta, Canada

A 15-month old male boxer was castrated by injecting his testicles with a 20% Calcium Chloride in Alcohol solution. In 144 days the width of the left testicle shrunk from 32 mm to 19 mm and the width of the right one shrunk from 25 mm to 13 mm. This process and progress has been documented with pictures and can be viewed online as well:
